PROFESSIONAL SUMMARY

Cloud and DevOps Engineering student with hands-on experience designing, deploying, and automating production-grade AWS infrastructure using Terraform, Docker, GitHub Actions, and Bash. Built ResQOps, a multi-region disaster recovery platform on AWS that delivers automated infrastructure failover in under 5 minutes with defined RTO and RPO targets. Proficient in CI/CD pipeline automation, Infrastructure as Code, Linux system administration, and observability using Prometheus and Grafana. Seeking Cloud Engineer, DevOps Engineer, SRE, and Platform Engineering internship and fresher roles.

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, VPC, IAM, S3, RDS, ECR, Lambda, SNS)
Infrastructure as Code: Terraform (Modular IaC, S3 Remote State, DynamoDB State Locking)
DevOps and CI/CD: Docker, Docker Compose, GitHub Actions, CI/CD Pipelines, Git, YAML
Monitoring: Prometheus, Grafana, AlertManager, Slack Alerting
Scripting: Python, Bash, C
Operating Systems: Linux (Ubuntu), Windows
Networking: TCP/IP, VPC Networking, Security Groups, Subnets, DNS

EXPERIENCE

Technical Intern Jun 2025 – Aug 2025
Indian Institute of Technology (IIT) Jammu | Remote, India

- Analyzed network-layer security vulnerabilities and infrastructure misconfigurations in Linux lab environments to identify hardening opportunities and document remediation strategies for enterprise networks
- Conducted application-layer traffic analysis and network reconnaissance to map system communication patterns and assess security posture across simulated enterprise infrastructure
- Produced reproducible infrastructure security and lab deployment documentation, standardizing setup procedures and improving environment configuration consistency across the team

PROJECTS

ResQOps – Automated Disaster Recovery Orchestration Platform 2025 – 2026
AWS (EC2, VPC, RDS, IAM, ECR, Lambda, SNS, S3), Terraform, Docker, GitHub Actions, Prometheus, Grafana, AlertManager, Python, Bash

- Architected a multi-region AWS disaster recovery platform across ap-south-1 (primary) and ap-southeast-1 (DR), achieving automated infrastructure failover in under 5 minutes with defined RTO and RPO targets
- Provisioned 20+ AWS resources across two regions using modular Terraform IaC with S3 remote state backend and DynamoDB state locking, enabling team-safe and reproducible infrastructure deployments
- Built a GitHub Actions CI/CD pipeline with OIDC authentication to AWS ECR, eliminating long-lived credentials and fully automating the container image build, push, and deployment lifecycle
- Deployed Prometheus, Grafana, and AlertManager observability stack with RTO-aligned alert rules, achieving under 1-minute downtime detection with CPU and health threshold alerts pushing real-time Slack notifications
- Engineered AWS Lambda and SNS disaster recovery trigger pipeline to initiate automated failover workflows on primary region failure detection

Terraform AWS Infrastructure Automation 2025
Terraform, AWS (EC2, VPC, S3), AWS CLI, GitHub

- Automated provisioning of AWS VPC, subnets, EC2, S3, and security groups using Terraform IaC with S3 remote state backend, enabling reproducible and team-safe infrastructure deployments

Dockerized Web Application Deployment on AWS EC2 2025
AWS EC2, Docker, Docker Compose, NGINX, Linux

- Containerized and deployed an NGINX web application on AWS EC2 using Docker and Docker Compose, configuring Linux networking, persistent storage volumes, and security group hardening for production readiness

EDUCATION

B.Tech – Computer Science and Engineering (Cybersecurity Specialization) Aug 2023 – Expected Jul 2027
The Neotia University, West Bengal | CGPA: 8.43 / 10.0
